

5.2.11. Scatter Plot for Age vs. Fare by S... 05:26

Write a Python code to plot a scatter plot showing the relationship between the 'Age' and 'Fare' columns in the Titanic dataset, with points color-coded by survival status. The scatter plot should display the following specifications:

- 1. Use the **Age** column for the x-axis and the **Fare** column for the y-axis.
- 2. Color the points based on the **Survived** column: **Red** for passengers who did not survive (**Survived = 0**). **Blue** for passengers who survived (**Survived = 1**).
- 3. Set the title of the plot to **"Age vs. Fare by Survival"**.
- 4. Label the x-axis as **'Age'** and the y-axis as **'Fare'**.

The Titanic dataset contains columns as shown below,

| P<br>a<br>s<br>s<br>e<br>n<br>g<br>e<br>r<br>I<br>d | S<br>u<br>r<br>v<br>i<br>v<br>e<br>d | P<br>c<br>l<br>a<br>s<br>s | N<br>a<br>m<br>e | S<br>e<br>x | A<br>g<br>e | S<br>i<br>b<br>S<br>p | P<br>a<br>r<br>c<br>h | T<br>i<br>c<br>k<br>e<br>t | F<br>a<br>r<br>e | C<br>a<br>b<br>i<br>n | E<br>m<br>b<br>a<br>r<br>k<br>e<br>d |

5.1.1. Stacked ... 16:02

Create a stacked area plot to visualize the temperature variations for three different cities (City A, City B, and City C) across the months of the year. The temperature data is provided for each city in the editor.

- Your task is to:
- Create a stacked area plot using the data.
  - Label the x-axis as "Month", the y-axis as "Temperature", and provide the title "Temperature Variation" for the plot.
  - Display the plot showing the temperature variation for each city throughout the months of the year.

5.2.1. Titanic Dataset

49:37

Write a Python program to analyze and visualize data from the Titanic dataset based on the following instructions:

Dataset Information:

The dataset is stored in a CSV file named `titanic.csv` and has been loaded using the `pandas` library. It contains the following columns:

- `Pclass`: Passenger class (1 = First, 2 = Second, 3 = Third).
- `Gender`: Gender of the passenger (male/female).
- `Age`: Age of the passenger.
- `Survived`: Survival status (0 = Did not survive, 1 = Survived).
- `Fare`: Ticket fare paid by the passenger.

Visualization:

To represent these trends, you will create 5 visualizations using Matplotlib. The visualizations should be arranged in a 3x2 grid (3 rows and 2 columns).

Visualization Details:

Write the code to create a series of visualizations as follows:

Bar Plot (Pclass Distribution):

5.2.2. Histogram of passenger information of Ti... 12:11

Write a Python code to plot a histogram for the distribution of the 'Age' column from the Titanic dataset. The histogram should display the frequency of different age ranges with the following specifications:

- 1. Use **30 bins** for the histogram.
- 2. Set the **edge color** of the bars to **black (k)**.
- 3. Label the x-axis as **'Age'** and the y-axis as **'Frequency'**.
- 4. Add the title **"Age Distribution"** to the histogram.

The Titanic dataset contains columns as shown below,

| P<br>a<br>s<br>s<br>e<br>n<br>g<br>e<br>r<br>I<br>d | S<br>u<br>r<br>v<br>i<br>v<br>e<br>d | P<br>c<br>l<br>a<br>s<br>s | N<br>a<br>m<br>e | S<br>e<br>x | A<br>g<br>e | S<br>i<br>b<br>S<br>p | P<br>a<br>r<br>c<br>h | I<br>c<br>k<br>e<br>t | F<br>a<br>r<br>e | C<br>a<br>b<br>i<br>n | E<br>m<br>b<br>a<br>r<br>k<br>e<br>d |

5.2.3. Bar plot of survival rate of passengers 04:15

Write a Python code to plot a bar chart that shows the count of passengers who survived and did not survive in the Titanic dataset. The chart should display the following specifications:

- 1. Use the 'Survived' column to show the count of survivors (0 = Did not survive, 1 = Survived).
- 2. Set the chart type to 'bar'.
- 3. Add the title "Survival Count" to the chart.
- 4. Label the x-axis as 'Survived' and the y-axis as 'Count'.

The Titanic dataset contains columns as shown below,

| PassengerId | Survived | Pclass | Name | Sex | Age | SibSp | Parch | Ticket | Fare | Cabin | Embarked |
|-------------|----------|--------|------|-----|-----|-------|-------|--------|------|-------|----------|
